AMENDMENTS TO THE CLAIMS

Amendments to the claims are reflected below in the **Listing of Claims**, which replaces all prior versions, and listings, of claims in this application.

Listing of Claims

1. (Currently Amended) A method comprising:

~~providing for~~ receiving a list of required elements;

~~providing for~~ adding elements from the list to a communication until an end of the list is reached, and each element in the list of required elements has been added to the communication;

~~providing for~~ parsing and modifying the elements according to a template and/or natural language rule and limitation set, wherein parsing and modifying includes modifying transitional zones and fusing the elements into a cohesive composite communication; and

~~providing for~~ dispatching the communication to media channels.

2. (Currently Amended) The method of claim 1, wherein parsing and modifying includes using input from the list of required elements.

3. (Currently Amended) The method of claim 1, wherein the list of required elements includes ~~content~~ information blocks and links to information blocks that [[is]] are embedded into ~~a responder or email~~ the communication.

4. (Currently Amended) The method of claim 1, wherein the list of required elements ~~include~~ includes information blocks and/or links to information blocks including an action item result ~~in the list~~.

5. (Canceled)

6. (Currently Amended) The method of claim [[5]] 3, wherein the information blocks are retrieved from at least one database or repository.

7. (Currently Amended) The method of claim [[5]] 3, wherein the information blocks are of a type to include text, email, HTML, graphics images, video, and or audio.

8. (Currently Amended) A machine-readable medium that provides instructions that, when executed by a machine, cause the machine to perform operations comprising:

    providing for receiving a list of required elements;

    providing for adding elements from the list to a communication until an end of the list is reached, and each element in the list of required elements has been added to the communication;

    providing for parsing and modifying the elements according to a template and/or natural language rule and limitation set, wherein parsing and modifying includes modifying transitional zones and fusing the elements into a cohesive composite communication; and

    providing for dispatching the communication to media channels..

9. (Currently Amended) The machine-readable medium of claim 8, wherein parsing and modifying includes using input from the list of required elements.

10. (Currently Amended) The machine-readable medium of claim 8, wherein the list of required elements includes content information blocks and links to information blocks that [[is]] are embedded into a responder or email the communication.

11. (Currently Amended) The machine-readable medium of claim 8, wherein the list of required elements include includes information blocks and/or links to information blocks including an action item result in the list..

12. (Canceled)

13. (Currently Amended) The machine-readable medium of claim [[12]] 10, wherein the information blocks are retrieved from at least one database or repository.

4

14. (Currently Amended) The machine-readable medium of claim [[12]] 10, wherein the information blocks are of a type to include text, email, HTML, graphics images, video, [[and]] or audio.

15. (Currently Amended) An apparatus comprising:

a composer to receive a list of required elements and add elements from the list to a communication until an end of the list is reached, and each element in the list of required elements has been added to the communication;

a natural language processor coupled with the composer, the natural language processor to parse and modify the elements according to a natural language rule and limitation set, and thereby to modify transitional zones and fuse the elements into a cohesive composite communication; and

a mailer or responder coupled with the natural language processor, the mailer or responder to dispatch the communication to media channels.

16. (Currently Amended) The apparatus of claim 15, wherein the natural language processor is to use input from the list of required elements in order to parse and modify.

17. (Currently Amended) The apparatus of claim 15, wherein the list of required elements includes content information blocks and/or links to information blocks that [[is]] are embedded into the responder or mailer communication.

18. (Currently Amended) The apparatus of claim 15, wherein the list of required elements include includes information blocks and/or links to information blocks including an action item result in the list.

19. (Canceled)

20. (Currently Amended) The apparatus of claim [[19]] 17, further comprising at least one database or repository coupled with the natural language processor to provide for retrieval of information blocks.

21. (Currently Amended) The apparatus of claim [[19]] 17, wherein the information blocks are of a type to include include text, email HTML, graphics images, and or audio.
